Pabbisetty Harshitha Sai
PES1UG24AM182

One Line Pitch

> **Raid Replay** gives kabaddi the open data standard it's missing: a lossless, two-way bridge between Pro Kabaddi raid-by-raid data and IPTC Sport Schema.

230 million people watch Pro Kabaddi, yet no open sports-data standard can describe a single raid.

The Existing Software

1 The Software

Standard: IPTC Sport Schema — sportschema.org
Data: kabaddiPy — github.com/kabaddiPy

2 What It Does

Sport Schema is IPTC's open standard for sharing sports results, stats and play-by-play. kabaddiPy collects raid-by-raid data from 10 seasons of Pro Kabaddi.

The Gap We Found

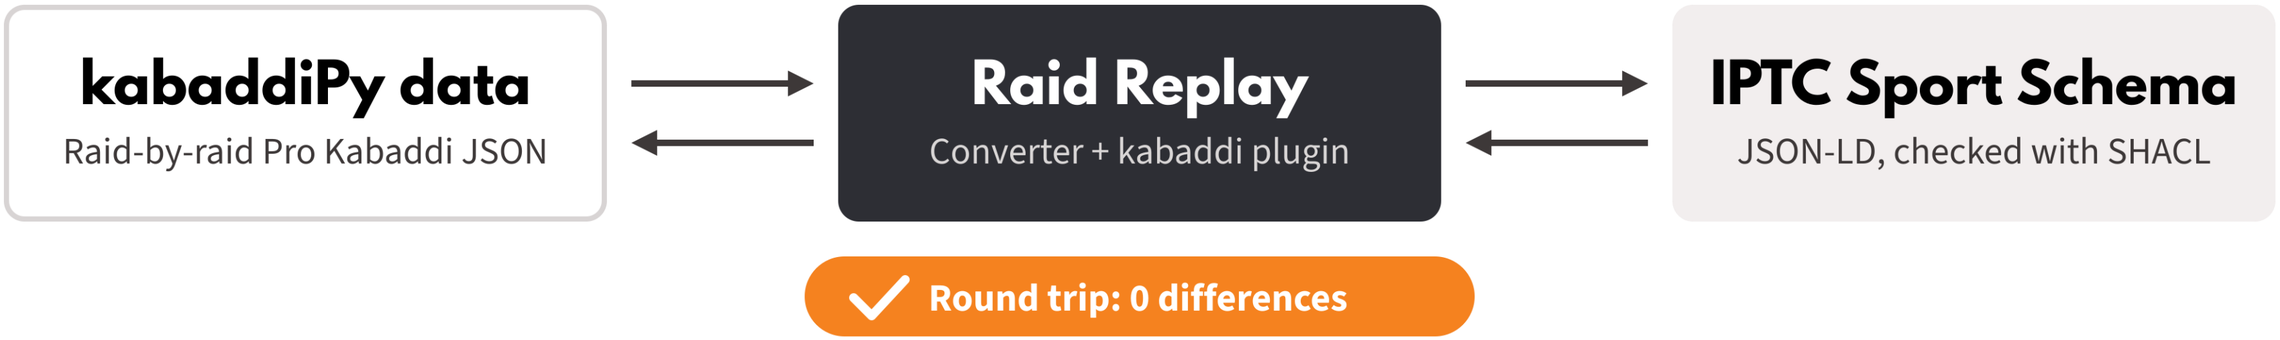

Sport Schema has plugins for 10 sports, but none for kabaddi. Raids, super tackles, do-or-die raids and all-outs have no standard home, so every dataset uses a one-off format.

Sport Schema plugins include:

✓ Soccer ✓ Tennis ✓ Rugby ✓ Esports ✗ Kabaddi

Kabaddi is our first step: the same plugin pattern works for any sport the standards leave out.

Our Idea

What We're Building

A proposed kabaddi plugin for IPTC Sport Schema, plus a converter that turns Pro Kabaddi raid data into Sport Schema and back.

The Improvement

Every raid, tackle, bonus, all-out, card and review becomes standard data that any news site, fantasy app or analyst can read.

How It Fits the Track

A lossless bridge between two named systems, kabaddiPy data and IPTC Sport Schema, round-tripped on 5 matches with 0 differences.

Our Approach

Tools & Technologies

Python + rdflib: Sport Schema graphs as JSON-LD

pySHACL: IPTC's shapes plus our kabaddi shapes

kabaddiPy-data: raid-by-raid data, seasons 1–10

DeepDiff: the round-trip check, 0 differences

HTML, SVG + JavaScript: the animated replay mat

What We'll Definitely Finish

Kabaddi vocabulary + validation shapes: raids, tackles, bonus, super tackles, do-or-die, all-outs, cards, reviews

Two-way converter: to Sport Schema and back

Round-trip proof: 5 test matches, 0 differences

Then: raid-by-raid replay of the Season 10 semi-final

How We'll Show It Works

Before vs. After

5 matches go to Sport Schema and back with 0 differences, and every file passes validation.

Who Benefits

Sports news sites, fantasy apps, kabaddi analysts and coaches, and other kabaddi leagues.

Risk & Backup Plan

kabaddiPy-data has no licence file. We'll ask its authors and keep a synthetic match ready.

Live demo: *the Season 10 semi-final replays raid by raid on an animated mat, driven only by our converted file. Same scoreboard from both formats, diff = 0.*
